PROFESSIONAL SUMMARY

Senior Software Engineer specializing in **e-commerce platforms, backend architecture, and commerce integrations**, with experience building and operating a multi-tenant platform serving **1,000+ businesses**. Skilled in **PHP, Python, SQL, and REST APIs**, with hands-on delivery across order-to-cash workflows, payments, inventory, customer-specific pricing, and ERP integrations. Combines end-to-end engineering ownership with a business focus on **profitable sourcing, faster fulfillment, and reliable transaction processing**. Experienced in optimizing relational databases, deploying cloud services, and applying AI-assisted development to deliver maintainable, production-ready software.

SKILLS

- **Languages: PHP**, **SQL**, Python, TypeScript, JavaScript, C++, C#, Dart
- **Backend & APIs: REST API design**, **state machines**, **idempotency & retries**, **webhooks**, **background job queues**, Django, FastAPI, Node.js
- **Commerce & Integrations: B2B e-commerce**, **order-to-cash workflows**, **returns & refunds**, **payment & ERP integrations**, **tiered & customer-specific pricing**, **multi-tenant account hierarchies**, inventory management, invoicing
- **Databases & Performance: PostgreSQL**, **MySQL**, **relational schema design & migrations**, **query & index tuning**, **caching**, MongoDB
- **Cloud & DevOps: Azure DevOps**, **CI/CD (GitHub Actions)**, **Docker**, **Kubernetes**, **structured logging & monitoring**, Terraform, AWS, Google Cloud Platform (GKE, Cloud Functions, Firebase), Linux, Git
- **AI-Augmented Development: Claude Code**, **GitHub Copilot**, Cursor, LLM integration, retrieval-augmented generation (RAG)

WORK HISTORY

Lead Amazon FBA / FBM Developer - December, 2025 to August, 2026
Veilion - Remote

- **Designed and built SourceLoop, an e-commerce sourcing and arbitrage platform**, automating product evaluation and purchasing recommendations to support **780% growth in Amazon store sales**.
- **Developed an automated sourcing engine that generates prioritized shopping lists** of products projected to achieve **at least a 30% margin**, accounting for purchase price, Amazon fees, and estimated shipping and fulfillment costs.
- **Built product profitability and purchasing workflows** that turn sourcing opportunities into actionable buy lists with quantities, estimated profit, and margin calculations, accelerating inventory acquisition for Amazon FBM resale.
- **Supported $100,000 in e-commerce sales at a 30% margin** through sourcing automation, pricing analysis, and inventory visibility, helping focus purchasing decisions on profitable resale opportunities.
- **Streamlined sourcing-to-shipment operations**, connecting purchasing decisions with inventory and order fulfillment workflows to increase daily shipment volume by **30 packages per day**.

AI Engineer Intern - May, 2025 to August, 2025
Hexion Inc. - Columbus, OH

- **Built and deployed production GenAI backend services using OpenAI APIs**, combining structured outputs and retrieval-augmented generation (RAG) to integrate contextual insights into internal reporting and support executive decision-making.
- **Engineered integrated data pipelines in Palantir Foundry** to unify market intelligence, supplier information, and pricing data, **reducing research time by approximately 85%** and accelerating access to decision-ready insights.
- **Contributed to the team leading the enterprise migration to Palantir Foundry**, consolidating data assets and delivering new data products across **supply chain, procurement, finance, and transportation**.
- **Modernized the company's most-viewed report and its underlying data pipelines**, migrating processing to **Microsoft Azure** and improving performance by **over 90%** to accelerate access to critical business information.

Founding Software Engineer - January, 2023 to August, 2024
Order Matic Technologies Private Limited - Hyderabad, India

- **Engineered a multi-tenant food ordering and delivery SaaS serving 1,000+ businesses**, owning architecture, development, deployment, and production operations across ordering, POS, payments, inventory, invoicing, and reporting.
- **Accelerated order-to-delivery workflows** by modeling order placement, confirmation, fulfillment, invoicing, and payment as audited state transitions, reducing order-confirmation time by **35%** and average order-to-fulfillment time by **8 minutes**.
- **Streamlined coordination with delivery partners** through REST API adapters, webhook processing, and automated retries, reducing order-to-partner handoff time by **40%** and helping improve on-time delivery from **85% to 94%**.
- **Built a reliable API foundation for storefront, POS, and administrative applications**, implementing versioned contracts, role-based access, pagination, and idempotent order and payment endpoints to reduce duplicate transactions by **90%**.
- **Designed and optimized relational data architecture** for tenant hierarchies, menu variants, customer-specific pricing, inventory ledgers, and order history, reducing critical query execution time by **55%** through index tuning and schema improvements.
- **Automated payment, ERP, and inventory reconciliation** to keep financial and operational records aligned, reducing manual reconciliation by **10 hours per week** and inventory-related order exceptions by **30%**.
- **Established automated testing, Docker-based environments, CI/CD, and production monitoring**, reducing deployment time by **65%** and mean time to resolve production incidents by **40%**.

Senior Software Engineer - September, 2017 to January, 2023
Gymclan Health and Fitness - Hyderabad, India

- **Led end-to-end engineering of a fitness platform serving 500,000+ users**, delivering integrated workout programs, nutrition tracking, health analytics, and personalized coaching experiences.
- **Architected backend services and REST APIs powering the mobile applications**, supporting user accounts, personalized fitness plans, program management, coach–client bookings, and progress analytics.
- **Engineered subscription and in-app payment workflows**, integrating provider webhooks, entitlement validation, and renewal processing to manage paid access across the subscription lifecycle.
- **Designed event-driven processing with Cloud Functions**, moving notifications, scheduled tasks, and analytics aggregation into asynchronous workflows to support responsive mobile experiences.
- **Partnered directly with the CTO on architecture and technical delivery within a two-engineer core team**, mentoring junior developers through code reviews and contributing to a platform rated **4.5/5 on Google Play across 1,800+ reviews**.
- **Built real-time, AI-assisted exercise tracking using computer vision and pose detection**, translating movement data into automated exercise analysis to enhance workout tracking and user feedback.

PROJECTS

Multi-Tenant Commerce & Order Management Platform — Order Matic

- **Engineered a commerce platform serving 1,000+ businesses**, connecting ordering, POS, payments, inventory, and invoicing through a unified backend.
- **Automated order-to-cash, cancellation, return, and refund workflows** using audited state machines, with idempotent API endpoints to safeguard order and payment processing.
- **Integrated payment, ERP, and delivery systems** through API adapters, webhooks, retries, and reconciliation jobs; modeled customer-specific pricing, account hierarchies, stock ledgers, and order history to support complex commerce operations.

E-Commerce Sourcing & Profitability Automation — SourceLoop

- **Built an automated Amazon sourcing platform** that converts product opportunities into prioritized purchasing lists with recommended quantities, estimated profit, and projected margins.
- **Developed margin-based product evaluation** incorporating acquisition costs, Amazon fees, and estimated fulfillment expenses to identify inventory targeting **at least a 30% margin**.
- **Connected sourcing, purchasing, and fulfillment workflows**, giving operators actionable visibility into what to buy, expected profitability, and inventory needs to accelerate arbitrage operations.

Intelligent Document Extraction Pipeline | Python · FastAPI · PostgreSQL · MCP · Docker

- **Automated the conversion of scanned documents into validated, structured records**, applying schema and field-level checks to support reliable downstream processing.
- **Implemented human review for low-confidence records** and exposed extraction as a reusable MCP tool, enabling AI agents to initiate processing through background job queues.
- **Evaluated field-level accuracy against labeled data**, providing a measurable foundation for assessing extraction quality before broader operational use.

AI Support & Knowledge Retrieval Agent — RCAC | Python · FastAPI · PostgreSQL/pgvector · Docker

- **Built a documentation-grounded support assistant** that retrieves relevant guidance, searches related GitHub issues, and drafts cited responses, escalating unanswered questions to human support.
- **Designed incremental document indexing** that processes only changed content, reducing redundant embedding work while keeping the knowledge base current.
- **Combined keyword and semantic search with reranking**, evaluating answer accuracy, query cost, and response latency against a labeled question set to guide improvements.

VEILION

EDUCATION

Computer and Information Technology - Master of Science - 2026
Purdue University - West Lafayette, IN

Computer Science - Bachelor of Science - 2024
Jain University - Bangalore, Karnataka
